

TrekPods

Trek-Tech's series of innovative monopod / hiking staff / tripod's provide photographers a unique tool allowing them to get images that with traditional equipment would have otherwise been unattainable.

- The TrekPod II is constructed of high grade aluminum and is the original TrekPod configuration. It comes complete with the original MagMount quick release system ball head and is rated for 4 kgs. (see MagMount for more info)
- The TrekPod GO! takes the TrekPod configuration to the next level. Breaking down into four pieces, allows for it to be packed into a carry-on sized piece of luggage. Included with the GO! is a padded travel case and the MagMount AR/i quick release system ball head. (see MagMount AR/i for more info)
- The TrekPod XL takes the design of the GO!, replaces the aluminum construction with carbon fibre and comes with the new MagMount PRO ball head. (see MagMount PRO for more info)

MagMount Ball Heads

Trek-Tech's MagMount ball heads incorporate a unique magnetic quick release system. Each ball head features a rare earth neodymium magnet on top of the ball head. Two steel adapters are included with each ball head. One for heavy equipment and one for light weight equipment.

- MagMount AR/i takes the MagMount configuration to the next level. Rounded off teeth surrounding the magnet help prevent heavier equipment from rotating while in portrait mode. They also allow for indexing equipment at 30 degree intervals. A safety clip locks equipment to MagMount AR/i and is rated for 4 kgs.
- MagMount is Trek-Tech's original quick connect/release system. A safety clip locks equipment to MagMount and is rated for 4 kgs.
- MagMount PRO incorporates Trek-Tech's newest Square Tooth Anti Rotation (STAR) technology. Square teeth eliminate any movement or sag of heavy equipment. MagMount PRO also incorporates Trek-Tech's new Trek Lock rotating locking system. MagMount PRO is our largest MagMount ball head and is rated for 6 kgs.

Mini Tripods

Trek-Tech has developed three mini tripods that truly allows the user to do more with less equipment.

- T'Pod is a very tough "table top" tripod that is easily deployed on a moments notice. Sturdy enough to stabilise heavy DSLR cameras, the T'Pod comes with the MagMount quick release system for ease of use with any optical device.
- Optera 230 takes mini tripods to a whole new level. Constructed of high density foam rubber surrounding a flexible endo-skeleton, the user can wrap the legs around any object to provide stability and use cord and D-ring system for added security. The integrated MagConnect STAR quick release system, provides a fast and easy way to mount your camera, flash, or other optical device. Wrap the legs up around your camera to use Optera as a "roll cage". Rated for 4.5 kgs.
- Optera 460 PRO improves upon the 230 by extending one of the legs to double length. This allows for the user to bend it up as added support for zoom lenses up to 400mm. As added security, a cord and D-ring system provides the Optera user the ability to strap the legs down tight and also helps prevent the flexible legs from splaying out under heavy equipment. The extra long leg also allows the user to wrap their Optera around wide fence posts, stumps, even use it for support on your car door. Rated for 6 kgs.

Other Tools

Trek-Tech has created a series of photography tools that incorporate a "do more, carry less" minimalist/multi-tool mentality.

- The Cammock is our "camera hammock" gear shelf. Attaches easily to tripod legs with velcro straps which you can leave on your tripod and quickly attach again using the clips. The Cammock is also water resistant so in a pinch you can use it as a rain tarp or ground cloth to keep you or your gear dry.

- Our MagBag 2 takes the bean bag support concept to a whole new level. In the centre is our MagConnect system to securely and quickly attach your equipment. It also comes with a water proof ground cloth/rain tarp that will keep you and your gear clean and dry. Use the MagBag 1 for point and shoot size cameras.

Cammock
£19.99

MagBag 2
£34.99

MagBag 1
£22.99

Accessories

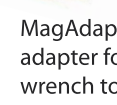

Trek-Tech provides our customers with accessories and replacement parts to ensure you have everything you need.

HF (Heavy Force) MagAdapter. For use with heavy equipment on MagMount. £6.99

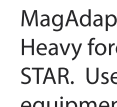

LF (Light Force) Mag Adapter. For use with light weight equipment on MagMount. £6.99

MagAdapter SD (Screw Down). Heavy force adapter screws into thread mount using the included allen wrench. Attaches to equipment tighter than HF adapter. £12.99

MagConnect System. Add MagConnect to any 1/4-20 mounting stud to take advantage of our magnetic quick release technology. Comes with LF & HF adapters. £17.99

MagAdapter STAR. (Square Tooth Anti Rotation) Heavy force adapter for use with MagMount STAR. Uses an allen wrench to secure onto equipment. £10.99

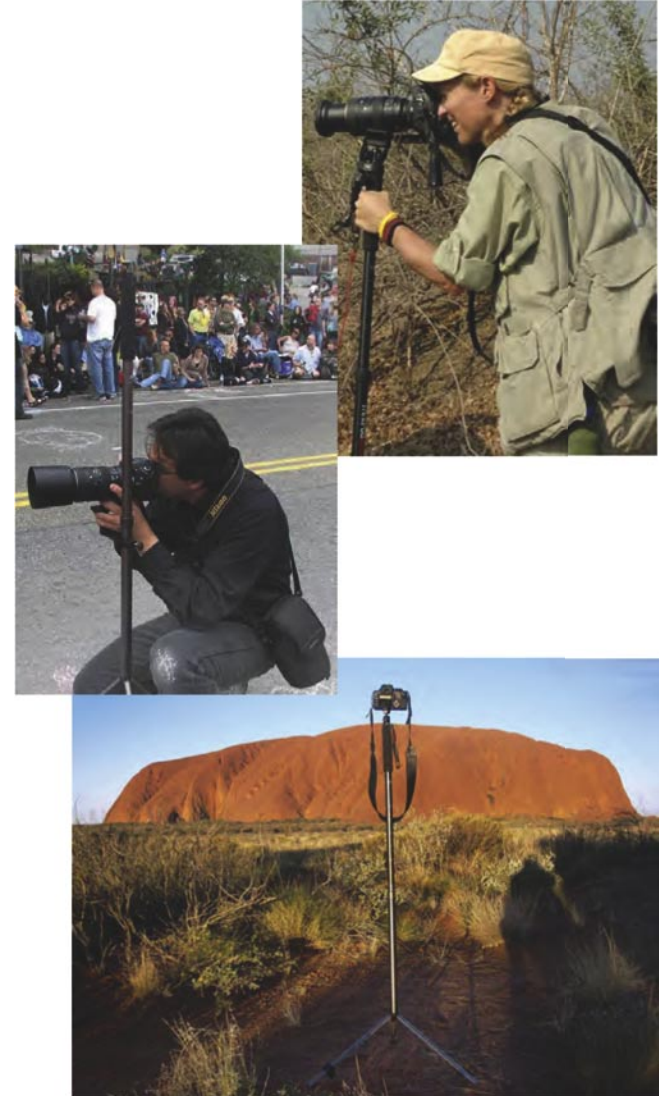

OptiMount (formally VersaMount). Use OptiMount to attach your camera down low on a TrekPod or tripod for ease of use in a seated or kneeling position. £19.99

OptiMount Kit. Included with our OptiMount is our MagMount STAR ball head and a STAR & LF adapter. This set up is perfect for macro photography and for mounting extra lighting systems. £44.99
